

gko::log::Logger

```
classDiagram
    class gko_log_Convergence["gko::log::Convergence< ValueType >"]
    class gko_log_Logger["gko::log::Logger"]
    gko_log_Convergence --|> gko_log_Logger
```

The diagram illustrates a class hierarchy. At the bottom is a gray-shaded box representing the base class `gko::log::Convergence` with a generic type parameter `< ValueType >`. A blue arrow points upwards from this box to a white box above it, representing the derived class `gko::log::Logger`. This indicates that `gko::log::Logger` inherits from `gko::log::Convergence`.
