

gko::log::Logger

```
classDiagram
    class gko_batch_log_BatchConvergence["gko::batch::log::BatchConvergence< ValueType >"]
    class gko_log_Logger["gko::log::Logger"]
    gko_batch_log_BatchConvergence --|> gko_log_Logger
```

The diagram illustrates a class hierarchy. At the bottom is a gray-shaded box representing the base class `gko::batch::log::BatchConvergence < ValueType >`. A blue arrow points upwards from this box to a white box above it, representing the derived class `gko::log::Logger`. This indicates that `BatchConvergence` inherits from `Logger`.

gko::batch::log::BatchConvergence
< ValueType >
